

→ Umbrella Activities (Direct Question Answer)

- ① Software project tracking and control
- ② Risk management
- ③ Software Quality Assurance
- ④ Technical Reviews
- ⑤ Measurement
- ⑥ Software Configuration Management
- ⑦ Reusability Management
- ⑧ Work product preparation & production

→ Polya's Principle (Direct/Scenario-based) **

① Understand the problem

② Plan a solution

③ Carry out the plan

④ Examination the result for accuracy

→ 1.1. Who are the stakeholders?

→ 1.2. What data, fn & feats are required to properly solve the problem?

→ 1.3. Is it possible to represent smaller problem that may be easier to solve understand?

→ 1.4. Can the problem be represented graphically?
Can an analysis model be created?

→ 2.1. Have you seen similar problems before?

→ 2.2. Is there existing software that implements data, fn/feats that are required?

→ 2.3. Can sub problems?

→ 2.4. Can you represent a solution in a manner that leads to effective solutions?

→ 2.5. Can a design model be created?

- ③ Carry out a plan
- ④ Examine the result

4.1. Is it possible...

→ Hooker's General Principles (theory) **

- ① The reason it all exists
- ② Keep it simple, stupid
- ③ Maintain the vision
- ④ What you produce, others will consume
- ⑤ Be open to the future
- ⑥ Plan ahead for reuse
- ⑦ Think! **

→ Software Development Myths (Scenario-based) **

- ① Management Myths
 - ② Customer Myths
 - ③ Practitioner's Myth
- If we get behind schedule, we can add more programmers and catch up. (Mongolian Horde)
 - A general statement of objectives is sufficient to begin writing programs - we can fill in the details later.
 - Once we write the program and get it to work, our job is done.
 - Software engineering will make us create voluminous and unnecessary documentation and will invariably slow us down.
