

Software Process Models

→ Waterfall Model

The Waterfall Model is the oldest paradigm for software engineering.

→ Advantages of the Waterfall Model

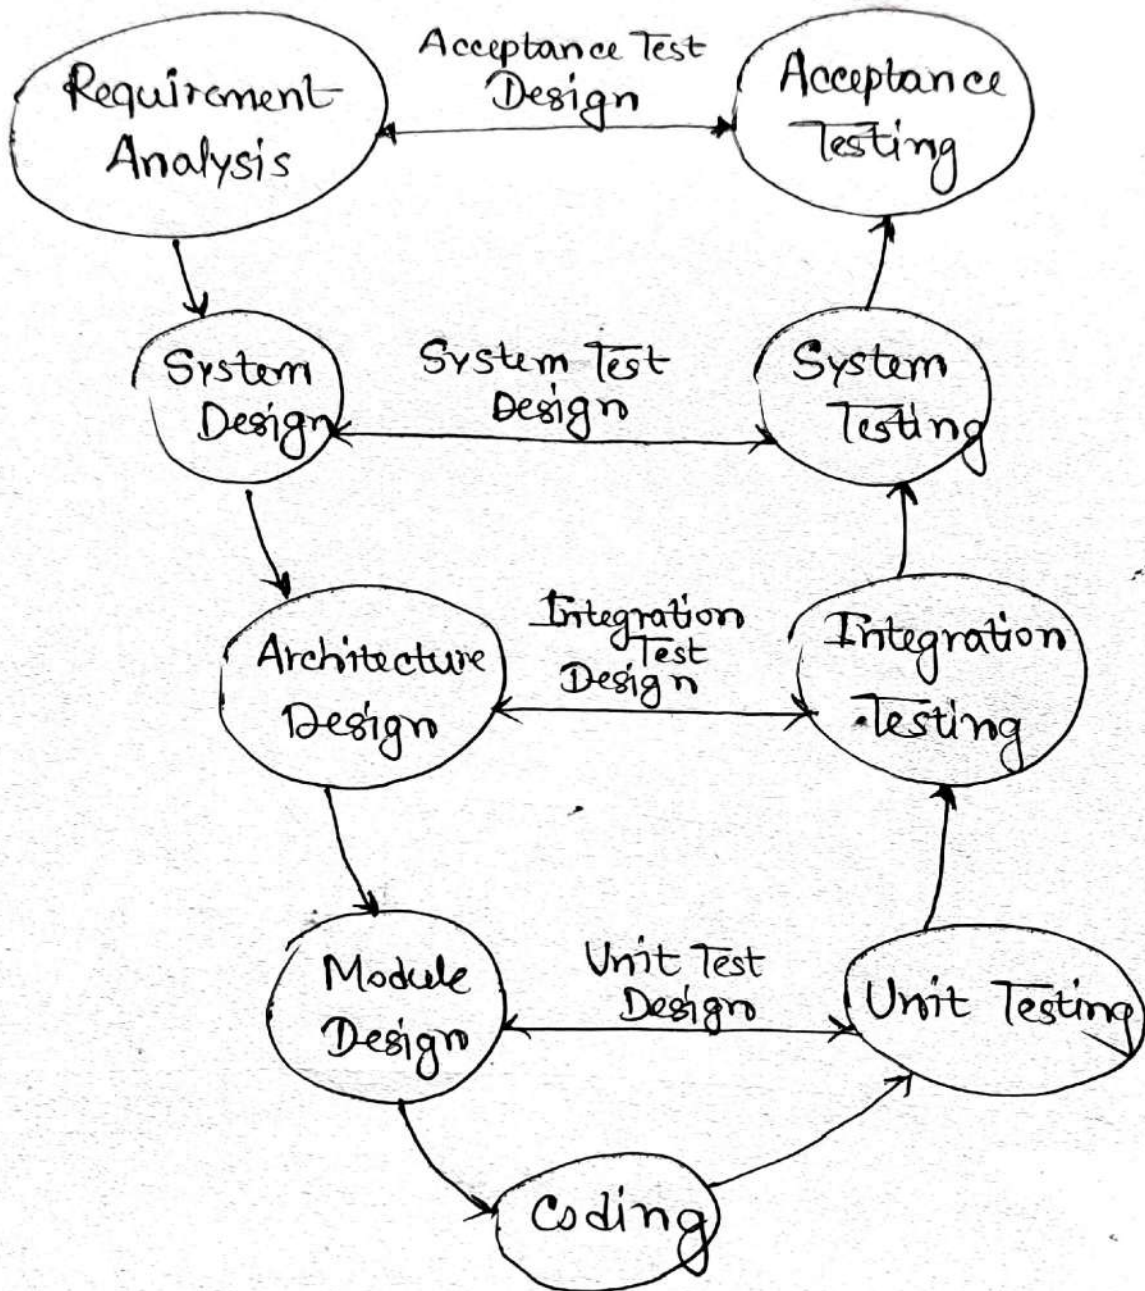

- ① Simple, easy to use & understand.
- ② Easy to manage due to the rigidity of the model — each phase has specific deliverables and review process.
- ③ Phases are processed and completed one at a time.
- ④ Phases do not overlap.
- ⑤ Works for smaller projects where requirements are very well understood.

For large scale projects →

employees need to be trained and perform a requirement analysis.
